

StratoFighter Lock Strength Test November 14, 2005

In my continued testing of the DarkOps StratoFighter, serial number RB0486, I performed a lock strength test today.

I made a jig that that would hold the blade while it was wedged between the cinder blocks in my backyard.

I wedged the above opened StratoFighter into the cement blocks

I then proceeded to stand on the handle of the knife

After testing the knives back lock strength by standing on the handle off the ground three times the knife was taken back to the house, taken out of the jig, and opened and closed to determine if the blade, handles or pivot had suffered any damage.

The picture shows the StratoFighter cleaned up and closed. Notice the StratoFighter blade is still perfectly centered in the handles after both the lateral strength and lock strength testing. The blade still opens as smooth as butter and the lockup is still tight with no evident blade play in any direction.

I don't just stand behind this knife, I STAND ON IT !!!!!!!!!!!!!!!!!!!!!!!
